

General BLS Medication Administration

BLS Medication Protocols

- No pediatric patients (<18 years old)
- No pregnant patients

General Administration Process:

1. Ensure non-pharmacologic BLS interventions are initiated before administering medication.
2. Confirm indication for medication administration and that patient wants pharmacologic treatment
3. Ask patient if they are allergic to any medications, then specifically if they are allergic to medication to be administered. If patient cannot answer, **do not administer medications other than Naloxone.**
4. Check packaging to confirm correct medication name, dose, route.
5. Confirm medication is not expired.
6. Administer medication
7. Re-assess patient and indication for medication every 5 minutes
